Technology-wise development time estimation.

Assuming 2 full-time developers using Cursor AI, with requirements finalized and API access available, the estimated development time is:

Layer / Category	Technology	Purpose	Estimated Time with Cursor AI
Frontend	React + TypeScript	Build website and application dashboard	2–3 weeks
UI Styling	Tailwind CSS	Create responsive layouts and user interfaces	3–5 days
Backend	Python + FastAPI	Handle APIs, business logic and application workflows	2–3 weeks
Workflow Automation	n8n	Orchestrate lead processing, AI calling, WhatsApp, appointments and follow-ups	1–2 weeks
Database	PostgreSQL (Supabase)	Store leads, users, calls, transcripts and appointments	3–5 days
ORM	SQLAlchemy	Manage database operations and data models	2–3 days
Voice AI	Sarvam AI	Power inbound and outbound AI voice conversations	1–2 weeks
Telephony / SIP	Sarvam AI SIP	Handle SIP-based calling connectivity	4–7 days
Queue Management	Redis	Manage pending calling jobs and background task queues	2–3 days
Background Processing	Celery	Execute asynchronous backend tasks and retries	3–5 days
Authentication	JWT + Refresh Tokens	Manage secure user authentication and sessions	2–3 days
Lead Integration	Google Sheets API	Synchronize manually added leads	2–3 days
Advertisement Integration	Meta Lead Ads API	Retrieve Facebook and Instagram advertisement leads	3–5 days
Messaging	WhatsApp Business Cloud API	Send automated WhatsApp messages and notifications	3–5 days
Appointment Scheduling	Calendly API	Manage demo and counselling appointments	2–3 days
Video Meetings	Zoom API	Create and retrieve online meeting details	2–3 days

Deployment	Docker	Package and deploy application services	3–5 days
Error Monitoring	Sentry	Track application errors and exceptions	1–2 days
Performance Monitoring	Grafana	Monitor system performance and operational metrics	2–3 days
